TITANTAG™ Fastener MAG

Frequency	UHF
Protocol	ISO18000-6-C EPC C1G2
Region	EU
Dimensions (mm)	W148 H18 T7.1
Silicon chip	Alien Higgs3
Memory (bits)	TOTAL 800
	EPC up to 480
	User up to 512
Metal friendly	On metal
Reads up to meters	5.0 (On metal)
	n.a (Off metal)
Operating temperature	-20<>80°C
Storage temperature	-20<>80°C
IP class	IP68
Year of release	2011
Product code	14818ME

[1] Fastener MAG Feature

[2] Fastener MAG Dimensions (mm)

[3] Key materials and processes

Silicon chip Alien Higgs3

- Read sensitivity of -20dBm Best performing among UHF Gen 2 RFID chips
- Total 800bits memory EPC 96bits (extensible to 480bits), User 512bits, TID 64 bits, Access& Kill password each 32bits and Lock password 64bits

www.alientechnology.com/wp-content/uploads/ALC-360%20Higgs3%202014-12-21.pdf

Antenna PCB FR4, Copper etched, Gold plated

- FR4 Most stable and widely applied antenna materials in recent 30 years worldwide, with highest durability and consistent electrical property
- Copper etched antenna has much higher accuracy with lower tolerance than aluminum etched antenna and conductive ink printed antenna.
- Gold is plated on chip bonded area of copper etched antenna, in order to enhance chip adhesion on antenna as well as electrical interconnection with antenna.

Packaging Double layer PCBs, laminated under high temperature and pressure

- Tag antenna has convoluted structure of two or three layers with copper ground plane, so tag is composed of double layer PCBs, tightly combined and laminated under high pressure and temperature of 200 $^{\circ}$ for >2 hours.
- Surface of PCBs is coated with TOYO (black) PSR, best of kind which can protect it against electrical stress and water ingression.

Chip bonding Wire bonded, aluminum or gold

•Wire bonding, though most complicated and expensive chip bonding method, is most stable in electrical interconnection and most durable in mechanical and temperature stresses. It, with highest precision, is also best fit for working on complicated antenna patterns of double layer PCBs.

Magnet Neodymium (ND35) https://en.wikipedia.org/wiki/Neodymium

• ND magnet (an alloy, Nd2Fe14B) can lift a thousand times its own weight. It is cheaper, lighter, and stronger than samarium-cobalt (SmCO) magnet. it loses, however, magnetism at lower temperatures @80C degree and tend to rust, while samarium-cobalt magnet does not. RFcamp does not adopt SmCO magnet, due to its fragility and high cost.

[4] Fastener MAG Performance

• Performance table (www.satcomresources.com/ERP-EIRP-Converter)

Up to meters*	On metal	Off metal
2W ERP**	5.0	n.a.
2W EIRP***	3.0	n.a.

- * Measured at anechoic chamber, national lab. (www.iot.nipa.kr), South Korea
- ** Measured by Alien Reader 9900+ (www.alientechnology.com)
- *** Measured by ATID Handheld AT880 (www.atid1.com)

Comparison with neighboring tags

									"аьт
MHz	860	865	870	875	880	885	890	895	900
Fastener MAG	- 3.00 -	2.50 -	2.00	- 1.75 -	1.00 -	0.25	0.50	1.25	2.00
Fastener	- 2.75 -	3.00 -	3.00	- 2.75 -	2.25 -	1.00 -	0.25	0.75	1.50

•FASTENER MAG reads up to 5.0 meters on metal, 20% shorter than FASTENER. Its read performance varies upon tag location, orientation, direction, RF environments, etc.

^{*}dBm: Minimum power tag needs in order to respond to RFID reader.

Comparison: on vs. off metal

*Comparison: with metal bolt in vs. without it in

[5] Fastener MAG Durability

• Temperature stress (Not applicable)

Test methods		
150℃, 6hrs		Pass
85°C/85%, 24hrs	Stored in humidity chamber at 85C/85%RH for 24 hours	Pass

• Ingression www.dsmt.com/resources/ip-rating-chart

IP Class	IP68	1.5 meter deep immersion, 1hr
----------	------	-------------------------------

Mechanical stress

Test methods	Descriptions	Pass/Fail
Iron ball fall test	Free fall of 1kg iron ball from 1.5meters height on any side of tag - 50 times	Pass
Vibration	IEC60068-2-6/64	Pass
Drop& topple	IEC60068-2-31	Pass
Shock (acceleration)	IEC60068-2-22	Pass
Pressure	50 Bar on any side of tag, 50 times	Pass

• Chemical stress (Not applicable)

Chemicals	Descriptions	Pass/Fail
Alkali	NaOH (10%, pH13) Immersed 24 hrs.	Pass
Petroleum	Gasoline, Diesel, Kerosene, lubricating oil Immersed 24 hrs.	Pass
Surfactant	Solvent for metal tool oils Immersed 24 hrs.	Pass

Electrical stress

• Radiation stress (N/A)

Gamma ray	kGy	

ISO 11137-1:2012 Radiation/Gamma Ray method

Autoclave stress (N/A)

|--|

ISO 17665-1:2006 Moist Heat/Steam Sterilization method

[6] Fastener MAG Options

Chip encoding service

- •Encodes EPC memory sector only*.
- •Encodes tags with 4 multiple digits from 16 bits (4 digits decimal or hex or ASCII) up to 480 bits (120 digits decimal or hex or ASCII) - upon customers' request.
- •Unless requested by customer, all tags are encoded with 24 digits decimal (Date 8 digits + Serial 16 digits), before shipped to customers. For example, code 20150814000000000001278 tells that tag was 1278th encoded on August 14, 2015.
- •Tag code can be permanently locked with password of 8 digits decimal or hex, upon customer's request.

Label& printing service

- Provides fast and reasonably priced custom label service with printing variable data, barcode and logo. •Label material is water proof and "hard
- to tear off" polysynthetic.

Laser engraving& direct printing service

- •With CO2 laser, tag surface is precisely and permanently etched into variable data, barcode and logo with black and yellow contrast.
- With silk screen printing or pad printing method, tag surface is permanently printed with various colored logo or text.

Backing adhesive (Not applicable)

Fasteners& brackets (Not applicable)

* Encapsulations (Not applicable)

^{*} For special encoding service (e.g. TID to EPC or user memory encoding), please ask RFcamp.
